Lab Assignment 13

Code

```scala
import scala.io.StdIn.readLine

object Main {

  // 1. Even check
  def checkEven(num: Int): Boolean = num % 2 == 0

  // 2. Palindrome check
  def palindromeCheck(st: String): Boolean = st == st.reverse

  // 3. Lucky sum
  def lucky(nums: List[Int]): Int =
    nums.map(n => if (n == 7) 14 else n).sum

  def main(args: Array[String]): Unit = {

    // Even check
    println("Enter a number:")
    val num = readLine().toInt
    println("Is even: " + checkEven(num))

    // Palindrome check
    println("Enter a string:")
    val str = readLine()
    println("Is palindrome: " + palindromeCheck(str))

    // Lucky sum
    println("Enter numbers separated by space:")
    val input = readLine()
    val nums = input.split(" ").map(_.toInt).toList
    println("Lucky sum: " + lucky(nums))
  }
}
```

Output

```
comp-pl-18@comp-pl-18:~$ scalac evenodd.scala
comp-pl-18@comp-pl-18:~$ scala Main
Enter a number:
6
Is even: true
Enter a string:
ANINA
Is palindrome: true
Enter numbers separated by space:
2 3 4 5
Lucky sum: 14
comp-pl-18@comp-pl-18:~$
```
